

COVID-19 Management

Perioperative Care

Doffing Operating Room PPE

Use a buddy to monitor proper technique!

- 1 Grab yellow isolation gown at waist and pull forward to break ties at back. Continue pulling to cause back of gown to tear away.

- 2 Roll gown into itself and peel off gloves at same time. Only touch inside of gown and gloves. Discard and perform hand hygiene.

- 3 Remove face shield or eye goggles from back without touching face. Consider saving for cleaning or re-use. Perform hand hygiene.

- 4 Remove N-95 by lifting bottom strap and then top strap over head. If not visibly soiled, consider continuous use or re-use.
